Water Culture Research: An Opinion of Self-governance

Wang Xinxin
Xi'an Fanyi University, Xi'an, China

Water culture develop emphasize water ability develop, water resource develop, water resource pool develop and water resource governance develop and these develop can constitute a realistic culture background for water. Water ability develop is water culture develops' new orient, water resource develop is water culture develop's new dynamic, water resource pool develop is water culture develop's new step, and water resource governance develop is water culture develop's new lean.

Keywords: water culture, water ability, water resource, governance

Self governance theory emphasize that any problem or issue can be tackled by people itself and be tackled by group itself and person itself, and the problem or issue's information can be collected by people itself and can be decision made by people itself and can be conducted by people itself, and these collect and conduct not a outcome of collective action but a outcome of self-governance, and self-governance put the emphasis on problem internalized, procedure internalized and outcome internalized and emphasize outer and outernalize internalize, that is to say collective action can be conducted internalized and collective behaviour can be deemed as internalized behaviour.

Start from point and perspective of self governance theory, people can analyze origin and develop of water culture, and blaze a new trail for water culture' develop. Water culture develop emphasize water ability develop, water resource develop, water resource pool develop and water resource governance develop[1] and these develop can constitute a realistic culture background for water. Water ability is a sort of ability that can be used to generate water, obtain water, preserve water and save water and use water and these ability can provide people with health and sound water and provide people with clean water and good water surroundings. Water ability is a important constitute of water culture and water ability is either material fruits or spiritual fruits of human practice and is fruits of objectivism and post of human essential power and these fruits refers to a sort of achievement and can be called as culture, thus water ability is a sort of water culture. Water resource is another water culture that can be used to refer to water reserve quality and quantity, and the quality and quantity is good then the water resource is good. Water resource pool is a summary on water resource concentrate and the pool refers to a concentrate land of water resource, the pool is rich then the water resource is rich, and pool is poor then the water resource is poor. When people regard water resource pool as a sort of culture, people start to condemn that water resource pool is a summary on material fruits and spiritual fruits of human waters, that is to say people create waters and waters constitute water resource pool and the pool stand for a water culture.

Water resource governance refers to another culture that concentrate on water resource management, water resource reserve, water resource save (Xi, 2026, p. 126) and water resource re-generate, and these manage and save can bring people with benefit and can provide people with ample and clean water, and these bring and provide can show human's new creates to other people, and this process is a culture process and culture procedure, and water governance should be regarded as a sort of culture.

Water Ability Develop: Water Culture Develops' New Orient

Water ability is a sort of water culture, and water ability not only refers to ability of using and reserving water but also refers to ability of developing water, and water ability is a summary on material ability and spiritual ability of humans and water ability can shape a atmosphere and realign a structure for human beings, that is to say, water ability can exert the influence of culture, and can exert the same function as culture, therefore, water ability is a sort of culture and can be called as water culture.

Water ability can be categorized as basic water ability and expand water ability, and basic water ability refers to ability of using water, reserving water and saving water, and expand water ability refers to ability of utilizing water and developing water, that is to say, daily use of water can be deemed as basic ability of water resource (Li, 2026, p. 40), and deep use and extensive and expand use of water can be deemed as expand ability of water resource, basic ability can be used to meet the needs of people' s every daily, and expand ability can be used to meet the further needs of human being, that is to say, people can use basic water ability to meet their daily needs and use expand ability to meet the needs of further and leap ahead.

Water ability can be constructed by means of learning and practicing and people should learn how to generate and use and save water, and learn how to reserve water and preserve water, and people must shape a atmosphere of saving water and reserving water then can they shape a culture of saving water and reserving water, and can they shape ability of generating water and saving water. Therefore, ability is in the same line and same align of culture and ability can be called as culture in some extent and in some stances, and water ability construct is in some extent of water culture constructing and water ability is and can be deemed as water culture.

Water ability is a general ability of human being, water ability is not only relevant to survival of human beings, but also relevant to develop of human beings, water ability be acquired is a status that refers to people obtain and acquire technique of water and refers to people have the competency to reserve and save and use water. When people acquire the ability of water, people can flourish its origin and ethnic group and can create beautiful life and beautiful daily.

Water ability's self governance refers to water ability's self shape and self form, namely, people should learn water ability by themselves, and should learn water ability by self taught and self learn, people can purchase books and magazines to learn relevant techniques and abilities, and should search internet to collect information about water ability, only by doing this, can people shape water ability and promote their water ability.

Water Resource Develop: Water Culture Develop's New Dynamic

Water resource develop is water culture develop's new dynamic, and water resource develop can follow several trails and water resource use, water resource reserve, water resource save and water resource distribute can be included in water resource develop trails, and people can develop many trails and roads and utilize these trails and roads to develop and excavate water resource.

The first develop trail of water resource is water resource reserve, that is to say, reserve is a sort of developing trail and people can build up new river and lake and reservoir to reserve water resource, and these reserve can provide people with ample water resource and bring people with ample clean water. Water reserving can be categorized as collective reserving and individual reserving, and collective reserving emphasize common storage of drinking water and individual reserving emphasize drinking water's individual storage, and put the emphasis on individual trail about clean water storage.

The second develop trail of water resource is water resource save, water resource save is a necessary step of water resource develop, and these save can provide people with enough water and bring people with necessary drinking, these drinking is necessary constitute of people's daily life, and can provide basic nutrition for human being. Water resource save can be learned from many trails and people can learn saving method from other people and books and magazines and internet, and these learn can bring people with stronger saving notion and faith, and under the guidance of these notion and faith, people begin to conduct save water behaviour and people can obtain fruit of saving water via these behaviour, and these conducts can provide people with health living manner and a large amount of clean drinking water.

The third develop trail of water resource is water resource use, water resource use is a important developing manner that emphasize develop water via use and utilize and these use and utilize can tell people how to correctly treat water resource and how to correctly use water resource so that these resource can serve for us. Water resource use can be categorized as planned use and free use, and these use can bring more opportunity for people and their life, and these use can bring people with more new creators and more chances, therefore water resource use is a important develop trail of water resource.

Self governance theory emphasize develop procedure of stuff and its outcome can be achieved under the condition of self governance and self control, water resource reserve and save and use is obviously can be deemed as a self governance procedure, reserve and save and use of water can be achieved under the condition of self control and self control can stimulate people's vitality and enthusiasm and spur people to save water and use water.

Water Resource Pool Develop: Water Culture Develop's New Step

Water resource pool stand for another water culture, herein, water can be deemed as a unit and several unit can constitute a pool, a pool is summary and comprehensive of many units and the more the unit the more the pool, and the more the unit have the more the pool have. Therefore, the water resource pool can be regarded as concentrate of water unit and the more the water unit, the more the water resource pool.

Water resource pool stand for a culture of concentrate, and the unit concentrate more, the larger the pool will have, the stronger the unit concentrate, the stronger the pool will have. People can draw water from water resource pool because the pool is public, and the public pool can concentrate water and provide water for any people. Residents and dwellers can draw water from the public pool and the public pool must tackle the issue of balance between draw rate and complimentary rate, when draw rate overleap complimentary rate, the public pool will dry out and when complimentary rate overleap draw rate, the public pool will rich and rich in water, therefore, people should control the draw rate and ensure that the public pool can not dry out (Wang, 2016, pp. 8-12).

Water resource pool's water can be drawn from many points and every point provide some water for the pool the pool will be abundant after that, and origin of water can come from everywhere and every point, so people say it as multi-centre governance or self governance. Water resource multi-center governance emphasize

people must draw water from other point to a concentrate point and the concentrate point can be regarded as a public pool and the public pool can concentrate water and provide water for other people.

Under the influence of multi-center governance or self governance, water resource pool can be built up and constructed and under the influence of water resource pool, people begin to supply and contribute water resource to the public, and afterhere, people begin to draw water from the public and drink water from public origin, and after that, people begin to draw water resource from the public pool according to the public rule and public law, and the outcome of these draw can ratify the effectiveness of water resource draw rate, the more enough the water resource pool surplus have the more effective the draw rate have, when the surplus beyond some extent the self governance can be regarded as effective.

Water Resource Governance Develop: Water Culture Develop's New Lean

Governance is a sort of culture and what is governance and how to governance is an important culture content, governance refers to a sort of manage and direct on someone or something and these mange and direct can guide people step forward a better situation, and lean towards a better condition. Governance is a culture that put the emphasis on manage, direct, negotiate and adjust and emphasize governance must bring people with win-win situation from beginning to the end, and must bring people with good governance from start to the close, that is to say, governance is a sort of win-win and good culture, and these culture emphasize the scrutinize on harmonious and good atmosphere, and emphasize the construct and shape of good surroundings, so governance can be deemed as atmosphere shape and surroundings construct and can be deemed as direct achieve and adjust achieve, and these shape and achieve can describe and portray the connotation and expand of governance.

Water resource governance put the emphasis on direct and guidance on water resource and put the emphasis on good water surroundings shape and good water atmosphere construct, that is to say, water resource governance emphasize internal governance and external governance on water. Internal governance on water emphasize water should be directed and guided in some way, namely, artificial rain achieve, river and lake construct, reservoir construct and dam construct, these conduct emphasize direct and guidance on water, at the same time, external governance on water is also important and keep going simultaneously, and these external conduct can be mainly showed as ecological construct, humanity construct and natural construct and so on, and these construct can be deemed as external behaviour.

Water resource governance is a new lean of water culture and these governance can lead people step towards situation of ample water, enough water, vital water, clean water and ecological water and these situation's achieve can help people achieve a good dream on clean water and ample water and can ensure that the water is enough to use.

Conclusion

Water culture develop can be showed as water ability develop, water resource develop, water resource pool develop and water resource governance develop and these develop can be deemed as new orient and new lean of water culture, water culture's develop can push water resource develop and water resource develop can push the promotion of drinking water's quality and enhance of dwellers living quality. When people push water culture develop and leap forward, people will know and understand the importance and meaning of water.
